1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 1-14 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-12 of copending Application No. 09/077,360. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakamura et al (5,652,045) or Uchino et al (5,915,162) or Yoshimura et al (5,920,760) or Oshika

Art Unit: 1775

(5,545,490) in view of Ostlund et al (5,549,980) or Gustafson et al (5,451,469) or Nemeth et al (4,610,931).

Nakamura et al or Uchino et al or Yoshimura et al or Oshika disclose the claimed multilayered coating on a cemented carbide. They do not disclose the claimed substrate.

Ostlund et al or Gustafson et al or Nemeth et al discloses the claimed substrate used with multilayered coatings.

It would have been obvious to one of ordinary skill in the art to use the substrates of Ostlund et al or Gustafson et al or Nemeth et al in the invention of Nakamura et al or Uchino et al or Yoshimura et al or Oshika as claimed, as these substrates are known in the tool art to provide improved performance, as shown by Ostlund et al or Gustafson et al or Nemeth et al.
